CONTENTS

Phenomena of vortex shedding and flow interference of three cylinders in different equilateral arrangements. K. LAM and W. C. CHEUNG *page* 1

An experimental study of the wake of gas slugs rising in liquids. J. B. L. M. CAMPOS and J. R. F. GUEDES DE CARVALHO 27

Three-dimensional wave patterns generated by moving disturbances at transcritical speeds. GEIR PEDERSEN 39

Radiation and diffraction of second-order surface waves by floating bodies. P. D. SCLAVOUNOS 65

The energetics of the interaction between short small-amplitude internal waves and inertial waves. D. BROUTMAN and R. GRIMSHAW 93

Spreading of the interface at the top of a slightly polydisperse sedimenting suspension. ROBERT H. DAVIS and MARK A. HASSEN 107

The dynamics and structure of double-diffusive layers in sidewall-heating experiments. J. TANNY and A. B. TSINOBER 135

Statistical characteristics of wall turbulence with a passive scalar. Y. NAGANO and M. TAGAWA 157

Effects of finite depth and current velocity on large amplitude Kelvin–Helmholtz waves. V. BONTOZOGLOU and T. J. HANRATTY 187

On the wind force needed to dislodge a drop adhered to a surface. PAUL A. DURBIN 205

Breaking of relativistic simple waves. O. MUSCATO 223

One-dimensional closure models for three-dimensional incompressible viscoelastic free jets: von Kármán flow geometry and elliptical cross-section. S. E. BECHTEL, M. G. FOREST, D. D. HOLM and K. J. LIN 241

Time-periodic convection in porous media: transition mechanism. PAUL H. STEEN and CYRUS K. AIDUN 263

Rigorous bounds on the nonlinear saturation of instabilities to parallel shear flows. THEODORE G. SHEPHERD 291

The nonlinear breakup of a magnetic layer: instability to interchange modes. F. CATTANEO and D. W. HUGHES 323

Semigeostrophic theory as a Dirac-bracket projection. RICK SALMON 345

The stability of boundary-layer flow over single- and multi-layer viscoelastic walls. K. S. Yeo 359

Viscoelastic response of a floating ice plate to a steadily moving load. R. J. Hosking, A. D. Sneyd and D. W. Waugh 409

Investigation of the flow between a pair of circular cylinders in the flopping regime. H. J. Kim and P. A. Durbin 431

Viscoelastic inertial flow driven by an axisymmetric accelerated surface. R. G. Larson 449

A study of forces, circulation and vortex patterns around a circular cylinder in oscillating flow. E. D. Obasaju, P. W. Bearman and J. M. R. Graham 467

Instabilities caused by oscillating accelerations normal to a viscous fluid–fluid interface. David Jacqmin and Walter M. B. Duval 495

Propagation of weak shocks through a random medium. Lambertus Hesselink and Bradford Sturtevant 513

The turbulent near wake at a sharp trailing edge. E. A. Bogucz and J. D. A. Walker 555

Vindication of mode-coupled descriptions of multiple-scale water wave fields. Keith A. Brueckner and Bruce J. West 585
